

**CALL FOR YOUR CONTRIBUTION TO THE SUSTAINABLE ENERGY CONFERENCE AS TO BE HELD 2-ND HALF 2017**

### **URGENCIES RUN EVEN HIGHER THESE YEARS !!!**

- EUROPE moves too slow with programs for CO-2 reduction and the development of sustainable energy sources.
- Neglecting initiatives of industries in the regions
- and sometimes destroys companies initiatives
- Neglecting democratic forces in the regions
- Climate conferences (even on world-level) show insufficient results, nor actions

### **MEANWHILE :**

- Climate changes cause disruptions of weather behaviour. See the floods in the UK-regions, Spain and other places.
- The world production of CO-2 increases. The year 2015 was even a record !
- Earlier developments and initiatives stop or stall.
- Governments create short-term panic plans without consultation of experts and involvement of people in the regions.

**So: Let's act and create steps to real solutions !**

## **Sustainable energy from the regions.**

### **Actoins with Impact.**

The frontpicture shows the regions of Europe and indicated EFA-parties/-regions with possible develoment of sustainable energy sources. We are looking for parties who are willing to participate in the organisation of a European sustainable energy conference with "IMPACT". This means that we are preparing ourselves for solutions which have an impact for the regions, and their people. This will not be a normal conference with speakers and some conclusions in a final report. The type of conference we mean will show real actions and projects.

### **Your support and contribution.**

We ask the regions, their parties, to mobilize the expertise from their region and/or country and see in which area of sustainable energy the best contribution can be delivered. It is crucial that at least 3 parties from different countries are part of the organisation and build the roadmap to the conference. This is also essential for the profiling of the EFA and the different members.

**We will use unconventional methods to get the best result from such an event. We aim for tracable actions and projects with Impact.**  
See also [www.eukep.eu](http://www.eukep.eu) for more information.

## **The sustainable energy sources:**

- Wind (e.g. Friesland, Jutland, Northern-german area's ?)
- Solar PV and CSP (Spain, Italy ?)
- Bio-energy
- Hydropower
- Geothermal
- Tydal power (Scotland ?)
- CO2 storage
- Energy saving & Storage
- Others like Fusion, . . . . .

All sources will be part of a pre-study to collect all possibilities for further development, results and impact for the next 50 years.
